

MFG Core Infrastructure (USD)

AS AT 30 SEPTEMBER 2023

PORTFOLIO MANAGER

GERALD STACK

INVESTMENT PHILOSOPHY

To prudently invest in outstanding infrastructure and utilities companies at attractive prices that exhibit highly predictable cashflows.

OBJECTIVES

To achieve attractive risk-adjusted returns over the medium to long term; while reducing the risk of permanent capital loss.

PORTFOLIO CONSTRUCTION

Diversified rules-based portfolio applying our proprietary infrastructure classification.

Valuation driven benchmark-unaware strategy.

Highly defensive, inflation-linked exposure.

PERFORMANCE CHART GROWTH OF USD \$10,000 (NET)²

Past performance does not predict future returns.

¹ Comprised of all Infrastructure strategies.

² Returns are for the Global Core Infrastructure Composite and denoted in USD. Performance would vary if returns were denominated in a currency other than USD. Refer to the GIPS Disclosure section below for further information. Strategy inception is 18 January 2012. Composite (Net) returns are net of fees charged to clients and have been reduced by the amount of the highest fee charged to any client employing that strategy during the period under consideration. Actual fees may vary depending on, among other things, the applicable fee schedule and portfolio size. Fees are available upon request.

³ Outperformance consistency indicates the percentage of positive excess returns for rolling 3 year returns since inception.

⁴ The Benchmark or Global Infrastructure benchmark is comprised of the following: from inception to 31 December 2014 the benchmark is UBS Developed Infrastructure & Utilities Index Net Total Return and from 1 January 2015 onwards, the benchmark is the S&P Global Infrastructure Index Net Total Return. Note: the UBS Developed Infrastructure and Utilities Index Net Total Return ceased to be published from 31 May 2015, replaced on 1 January 2015 with the S&P Global Infrastructure Index Net Total Return.

⁵ Risk measures are for the Global Core Infrastructure Composite before fees. The Global Equities Index is the MSCI World NTR Index.

IMPORTANT INFORMATION

This material is being furnished to you to provide summary information regarding Magellan Asset Management Limited trading as MFG Asset Management ('MFG Asset Management') and an investment fund or investment strategy managed by MFG Asset Management ('Strategy'). This material is not intended to constitute advertising or advice of any kind and you should not construe the contents of this material as legal, tax, investment or other advice. In making an investment decision, you must rely on your own examination of any offering documents relating to the Strategy.

The investment program of the Strategy presented herein is speculative and may involve a high degree of risk. The Strategy is not intended as a complete investment program and is suitable only for sophisticated investors who can bear the risk of loss. The Strategy may lack diversification, which can increase the risk of loss to investors. The Strategy's performance may be volatile. Past performance is not necessarily indicative of future results and no person guarantees the future performance of the Strategy, the amount or timing of any return from it, that asset allocations will be met, that it will be able to implement its investment strategy or that its investment objectives will be achieved. Statements contained in this material that are not historical facts are based on current expectations, estimates, projections, opinions and beliefs of MFG Asset Management or the third party responsible for making those statements (as relevant). Such statements involve known and unknown risks, uncertainties and other factors, and undue reliance should not be placed thereon. This material may contain 'forward-looking statements'. Actual events or results or the actual performance of an MFG Asset Management financial product or service may differ materially from those reflected or contemplated in such forward-looking statements. The Strategy will have limited liquidity, no secondary market for interests in the Strategy is expected to develop and there are restrictions on an investor's ability to withdraw and transfer interests in the Strategy. The management fees, incentive fees and allocation and other expenses of the Strategy will reduce trading profits, if any, or increase losses.

No representation or warranty is made with respect to the correctness, accuracy, reasonableness or completeness of any of the information contained in this material. This information is subject to change at any time and no person has any responsibility to update any of the information provided in this material. This material may include data, research and other information from third-party sources. MFG Asset Management makes no guarantee that such information is accurate, complete or timely and does not provide any warranties regarding results obtained from its use. MFG Asset Management will not be responsible or liable for any losses, whether direct, indirect or consequential, including loss of profits, damages, costs, claims or expenses, relating to or arising from your use or reliance upon any part of the information contained in this material including trading losses, loss of opportunity or incidental or punitive damages.

No distribution of this material will be made in any jurisdiction where such distribution is not authorised or is unlawful. This material does not constitute, and may not be used for the purpose of, an offer or solicitation in any jurisdiction or in any circumstances in which such an offer or solicitation is unlawful or not authorized or in which the person making such offer or solicitation is not qualified to do so. United Kingdom - This material does not constitute an offer or inducement to engage in an investment activity under the provisions of the Financial Services and Markets Act 2000 (FSMA). This material does not form part of any offer or invitation to purchase, sell or subscribe for, or any solicitation of any such offer to purchase, sell or subscribe for, any shares, units or other type of investment product or service. This material or any part of it, or the fact of its distribution, is for background purposes only. This material has not been approved by a person authorised under the FSMA and its distribution in the United Kingdom and is only being made to persons in circumstances that will not constitute a financial promotion for the purposes of section 21 of the FSMA as a result of an exemption contained in the FSMA 2000 (Financial Promotion) Order 2005 as set out below. This material is exempt from the restrictions in the FSMA as it is to be strictly communicated only to 'investment professionals' as defined in Article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (FPO).

United States of America - This material is not intended as an offer or solicitation for the purchase or sale of any securities, financial instrument or product or to provide financial services. It is not the intention of MFG Asset Management to create legal relations on the basis of information provided herein. Where performance figures are shown net of fees charged to clients, the performance has been reduced by the amount of the highest fee charged to any client employing that particular strategy during the period under consideration. Actual fees may vary depending on, among other things, the applicable fee schedule and portfolio size. Fees are available upon request and also may be found in Part II of MFG Asset Management's Form ADV.

The Global Infrastructure Benchmark is comprised of the following: from inception to 31 December 2014 the benchmark is UBS Developed Infrastructure & Utilities Net Total Return Index and from 1 January 2015 the benchmark is S&P Global Infrastructure Net Total Return Index. The benchmark changed because UBS discontinued their index series.

The UBS Developed Infrastructure & Utilities Net Total Return Index is a market capitalisation weighted index that is designed to measure the equity performance of listed Infrastructure and Utility stocks. Index results assume the reinvestment of all distributions of capital gain and net investment income using a tax rate applicable to non-resident institutional investors who do not benefit from double taxation treaties. The S&P Global Infrastructure Net Total Return Index is a market capitalisation weighted index that is designed to track 75 companies from around the world diversified across three infrastructure sectors energy, transportation and utilities. Index results assume the reinvestment of all distributions of capital gain and net investment income using a tax rate applicable to non-resident institutional investors who do not benefit from double taxation treaties.

GLOBAL INVESTMENT PERFORMANCE STANDARDS (GIPS®) DISCLOSURE

Magellan Asset Management Limited, doing business as MFG Asset Management in jurisdictions outside Australia and New Zealand, (MFG Asset Management) claims compliance with the Global Investment Performance Standards (GIPS®).

For the purpose of complying with GIPS, the Firm is defined as all discretionary portfolios managed by MFG Asset Management, excluding brands managed by subsidiaries operating as distinct business entities. MFG Asset Management is a wholly-owned subsidiary of the publicly listed company Magellan Financial Group Limited. MFG Asset Management is based in Sydney, Australia. Total Firm assets is defined as all assets managed by MFG Asset Management, excluding assets managed by subsidiaries operating as distinct business entities.

The Global Core Infrastructure composite is a global strategy investing in strictly defined or "pure" infrastructure companies (typically 80-100). The filtered investment universe is comprised of stocks that 1. generate reliable income streams, 2. benefit from inflation protection and have an appropriate capital structure. The investment objective of the strategy is to minimise the risk of permanent capital loss; and achieve superior risk adjusted investment returns over the medium to long-term. The composite was created in February 2012.

To achieve investment objectives, the composite may also use derivative financial instruments including, but not limited to, options, swaps, futures and forwards. Derivatives are subject to the risk of changes in the market price of the underlying securities instruments, and the risk of the loss due to changes in interest rates. The use of certain derivatives may have a leveraging effect, which may increase the volatility of the composite and may reduce its returns.

A copy of the composite's GIPS compliant presentation and/or the firm's list of composite descriptions are available upon request by emailing client.reporting@magellangroup.com.au.

GIPS® is a registered trademark of CFA Institute. CFA Institute does not endorse or promote this organization, nor does it warrant the accuracy or quality of the content contained herein.

The representative portfolio is an account in the composite that closely reflects the portfolio management style of the strategy. Performance is not a consideration in the selection of the representative portfolio. The characteristics of the representative portfolio may differ from those of the composite and of the other accounts in the composite. Information regarding the representative portfolio and the other accounts in the composite is available upon request.

USD is the currency used to calculate performance.

COREUSD45199

Strategy Commentary

The strategy recorded a negative return for the quarter ended 30 September, with central banks hinting interest rates may stay higher for longer.

Stocks that detracted most were investments in communications companies Crown Castle and Cellnex, as well as Australian toll road operator Transurban. Shares of US-based Crown Castle and Spain-based Cellnex declined during the period as bond yields pushed higher amid ongoing concerns about inflation. Crown Castle was also affected by weaker performance at its tower service business. Meanwhile, Transurban traded lower on the combination of rising bond yields and weaker-than-expected traffic volumes in one of its major markets.

Some of the largest stock contributors over the three-month period included Fraport, Ferrovial and Grupo Aeroportuario Del Centro Norte (OMA). Shares of Germany-based airport operator Fraport rose on stronger-than-expected earnings results, ongoing traffic recovery and a positive lift to its financial outlook. The Netherlands-listed toll road and airport operator Ferrovial lifted on strong traffic activity at its largest asset (the 407 ETR toll road in Canada) and improved performance from Heathrow airport. Mexican airport operator OMA saw its share price rise during the quarter after reporting record profitability on the back of robust travel demand and realised cost efficiencies.

Stock contributors/detractors are based in local currency terms unless stated otherwise.

Outlook

Notwithstanding our expectations for greater volatility in the short to medium term driven by inflation and interest rates, we are confident that the underlying businesses we have included in our defined universe and in our investment strategy will prove resilient over the longer term. We regard the businesses we invest in to be of high quality and, while short-term movements in share prices reflect issues of the day, we expect that share prices in the longer term will reflect the underlying cash flows which would increase the likelihood of investment returns being consistent with our expectations.

The strategy seeks to provide investors with attractive risk-adjusted returns from infrastructure securities. It does this by investing in a portfolio of listed infrastructure companies that meet our strict definition of infrastructure. We believe that infrastructure assets, with requisite earnings reliability and a linkage of earnings to inflation, offer attractive, long-term investment propositions. Furthermore, we believe the resilient nature of earnings and the structural linkage of those earnings to inflation means that investment returns typically generated by infrastructure stocks are different from standard asset classes and offer investors diversification when included in an investment portfolio. In the current uncertain economic and investment climate, the historically reliable financial performance of infrastructure investments makes them attractive, and an investment in listed infrastructure has the potential to reward patient investors with a long-term time frame.

Story: American Water

(Jowell Amores – Portfolio Manager)

AMERICAN WATER

A high-water mark for infrastructure investment Leveraging Scale

Few utilities in Magellan's infrastructure universe are in a position to leverage their scale in the same way as American Water Works (NYSE: AWK).

As the largest listed water utility in the US, American Water has the advantage of scale that is central to its business model and overall strategy. The company leverages this scale primarily through purchasing power, cheaper financing and efficient labour, which ultimately leads to lower costs. This may be less of a priority for some utilities but for American Water this is critical. This scale allows the company to:

1. **Invest in and expand the asset base.** Under its regulatory scheme, reducing operating costs allows American Water to increase its asset base investments without causing large increases in customer bills. The company estimates that for every US\$1 of expense it can save, the utility can invest as much as US\$8 into the asset base and still keep customer bills unchanged. For American Water shareholders, this means the company is generating a return on the US\$8 investment instead of recovering that one dollar of expense.
2. **Better compete on acquisitions.** As much as it is about the price being paid to purchase a water utility, acquisitions still need approval from a government/regulatory body. Authorities will often ask for assurances from the buyer that customer rates will either decline or hold steady for an extended period. In these instances, American Water's ability to offer prospective customers more affordable utility bills (due to its scale) gives the company a competitive advantage when it comes to obtaining government and regulatory approval.

Exhibit 1 below illustrates American Water's operating and maintenance expense as a proportion of revenues, showing a sustained downward trend since 2010 driven by leverage of overhead costs and ongoing productivity. Over the period between 2010 and 2022, American Water has reduced its expense ratio by more than 12% despite acquiring more than 400,000 new customers.

Exhibit 1: Operating Cost-to-Revenue Ratio

Source: American Water Investor Presentation (August 2023)

Flywheel effect

When American Water began trading in 2008 following its IPO, the company began a major operational restructure to address its 48.5% Operation and Maintenance efficiency ratio. This naturally took some time to see an improvement (due to legacy processes and contracts) but costs eventually started to plateau, and revenues gradually increased with customer growth. Unbeknownst to most, this marked the start of the flywheel effect for American Water.

As presented in Exhibit 2, the cost efficiencies American Water was able to realise translated into a lower cost base. This subsequently gave American Water a competitive advantage when it came to acquiring other water utilities. The lower cost base meant that with economies of scale, American Water could offer prospective customers lower utility bills. It also meant American Water could offer a marginally higher price for a utility because it could achieve better cost synergies. Naturally, the proposition of affordable utility bills, as well as a competitive price, attracted sellers seeking to offload their water systems.

As American Water added new customers via acquisitions, it logically grew both the customer and asset base. This allowed American Water to extract more from its cost base, resulting in even greater cost efficiency. The leverage and efficiency subsequently enabled the company to make its next acquisition. This, in short, was American Water's flywheel turning and creating long-term sustainable earnings growth.

Exhibit 2: American Water's Flywheel

Source: Magellan

Of course, this raises the question: How specifically does American Water create operating leverage following an acquisition? As with any company with a large, fixed cost base, operating leverage comes from spreading costs over a larger customer base. American Water will use its buying power to bulk-purchase materials and equipment (e.g. chemicals, pipes, valves, construction materials, etc.) to lower the unit costs of the newly acquired utility. This operating leverage is particularly high when the business acquires a neighbouring utility, where it can maximise labour and resources.

Also underappreciated in the American Water investment thesis is the state of the US water market. American Water operates in a highly fragmented market where 84% of water systems in the US are still publicly owned. This is even more the case in the wastewater market where 98% of customers are served by municipal, local and state government entities. The fragmented state of the US water market has been slow to change over the years due in part to regulatory and government limitations. These restraints have, however, started to lift with the introduction of new state legislation and regulatory changes that better facilitate transactions. We believe that other factors such as the growing number of municipalities dealing with escalating budgetary pressures and rising debt burdens will also help push market consolidation.

"Selling the sewer system to New Jersey American Water was the right decision for our community. With private ownership of the system, the borough will eliminate the need for significant rate increases going forward and borrowing money for future improvements will end. Somerville will then be able to fund other needed projects, the sewer system will be maintained and improved on a consistent basis, and sewer rates will remain stable..." – Somerville Mayor Dennis Sullivan (3 October 2023)

Either way, we believe that American Water will be a primary beneficiary of a consolidating market due to the inherent advantages discussed above. This has become particularly evident in management's outlook for the company, which indicates that regulated acquisitions will grow four-fold in 2023 (in dollar terms; versus 2020) with another ~1.3m new customer additions in the pipeline¹. Acquisitions, of course, reveal only part of the overall American Water story, as Exhibit 3 shows the growth in regulated investments expected to occur over the next decade, which should translate into about 8-9% annual asset base growth.

¹ American Water August 2023 Investor Presentation

Exhibit 3: Regulated Capital Investments (US\$ in billions)

Source: American Water Investor Presentation (August 2023)

As with all infrastructure investments, American Water's growth isn't immune to risks and challenges. The utility is subject to many of the same risks as any regulated utility investment – regulatory, interest rate and macroeconomic risks. We believe American Water offers infrastructure investors a superior blend of long-term, low-risk and predictable earnings. Over the long term, American Water's simple-yet-effective business model provides us with comfort that it has the potential to achieve its guided 7-9% earnings and dividend CAGR over the next decade in a risk-averse way.

A pure water play

The history of American Water traces to 1886 when the American Water Works & Guarantee Company was founded. While much happened in between, 2003 was a year of note because American Water was acquired then by the German utility RWE, which then listed the company in 2008 via a 'spin-off'.

Today, American Water remains a stand-alone pure-play water business. The most important is the regulated business, which provides water and wastewater services to about 1,600 communities in 14 states. The unit's assets consist of more than 53,000 miles (85,000+ kilometres) of pipes, 540 water-treatment plants, 1,100 wells, 175 wastewater plants, 1,100 water-storage facilities and 1,700 pumping stations. This regulated business brings in more than 90% of the company's revenue. Approximately 26% of regulated revenue is sourced from New Jersey while another 23% comes from Pennsylvania. American Water's other business is the Military Service Group, where the subsidiary provides water services to 18 US military bases under 50-year contracts with the US government.
